

Consumer Price Developments in August 2022

Summary

- MAS Core Inflation rose to 5.1% on a year-on-year (y-o-y) basis in August, from **4.8%** in July.
 - o The pickup in core inflation was mainly driven by larger increases in the prices of services and food.
- CPI-All Items inflation came in at **7.5%** y-o-y in August, up from **7.0%** in July.
 - o The rise in headline inflation largely reflected higher private transport inflation, in addition to the pickup in core inflation.
- On a month-on-month (m-o-m) basis, core CPI and CPI-All Items increased by 0.5% and 0.9%, respectively.

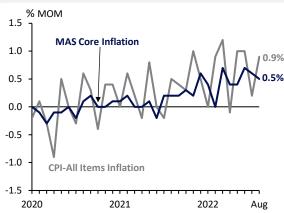

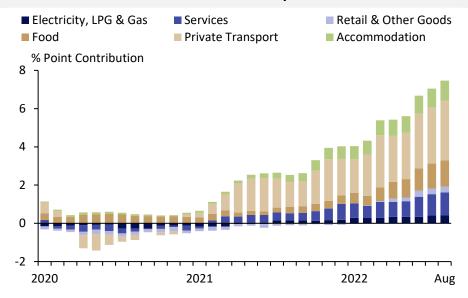

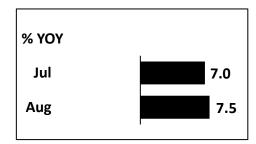

Chart 2: % Point Contribution to Year-on-year CPI-All Items Inflation

^{*} Private transport and accommodation are excluded from the MAS Core Inflation measure. Source: MAS, MTI estimates

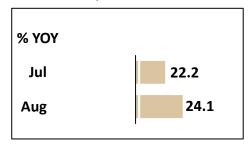

CPI-All Items inflation increased to 7.5% y-o-y in August.

CPI-All Items

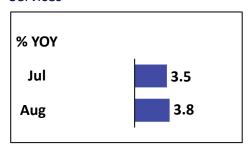

CPI-All Items inflation rose, largely on account of higher inflation for private transport, services and food.

Private Transport

Private transport inflation picked up due to a faster pace of increase in car prices.

Services

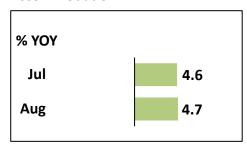

Services inflation increased, mainly because of a stronger pickup in holiday expenses.¹

Food

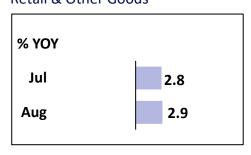

Food inflation rose as the prices of both food services and non-cooked food saw a steeper increase.

Accommodation

Accommodation inflation edged up alongside a larger increase in housing rents.

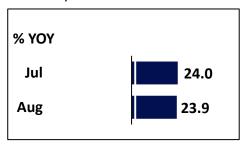

Retail & Other Goods

Retail & other goods inflation came in slightly higher on account of a faster pace of increase in the prices of clothing & footwear and household durables.

A portion of the holiday expenses CPI remained imputed in August as travel restrictions in some countries were still in place. For more details, please refer to the Technical Note in the Department of Statistics' release titled "Singapore Consumer Price Index for August 2022".

Electricity & Gas

Electricity & gas inflation edged down due to a smaller increase in gas prices.

Outlook

Globally, supply chain frictions have eased slightly and some commodity prices have levelled off. Nevertheless, global inflation is likely to stay elevated in the near term as key commodity markets continue to face supply constraints, and labour markets in many major economies remain tight. In addition, the recovery in domestic demand in some regional economies as COVID-19 restrictions are eased could lead to higher inflation in these economies. Hence, upward pressures on Singapore's import prices could persist.

On the domestic front, the labour market remains tight, keeping wage growth strong. Amid firm consumer spending, businesses are likely to pass on increases in labour costs and the prices of fuel, utilities and other imported inputs to consumer prices.

Hence, MAS Core Inflation is projected to stay elevated over the next few months. Car and accommodation cost increases are also likely to stay firm for the rest of the year. For the full year, CPI-All Items inflation is expected to come in at 5.0–6.0%, while MAS Core Inflation is projected to average 3.0–4.0%. Fresh shocks to global commodity prices, as well as domestic wage pressures remain as upside risks to inflation.

Annex: Price Indicators

CPI - All Items

The CPI is commonly used as a measure of consumer price changes in the economy. It tracks the change in prices of a fixed basket of consumption goods and services commonly purchased by the general resident households over time.

The CPI covers only consumption expenditure incurred by resident households. It excludes non-consumption expenditures such as purchases of houses, shares and other financial assets and income taxes etc.

The CPI – All Items provides a comprehensive overview of the prices of consumer goods and services. Nevertheless, useful information can also be revealed by complementary CPI series derived by excluding specific items in the All Items basket. For example, two other CPI series reported on a monthly basis are the CPI less imputed rentals on owner-occupied accommodation and the MAS Core Inflation.

MAS Core Inflation

The Monetary Authority of Singapore (MAS) monitors a core inflation measure that excludes the components of "Accommodation" and "Private Transport". These items are excluded as they tend to be significantly influenced by supply-side administrative policies and are volatile. Core inflation is meant to capture the generalised and persistent price changes that are driven by underlying demand conditions. It thus provides useful information for monetary policy which has the objective of ensuring price stability in the medium term.

CPI less imputed rentals on owner-occupied accommodation

Accommodation, one of the groups in the Housing & Utilities category of the CPI, comprises "rented and owner-occupied accommodation", as well as "housing maintenance & repairs". A significant share of the Accommodation group is "owner-occupied accommodation (OOA)" cost, which is meant to reflect the costs to homeowners of utilising the flow of services provided by their homes over an extended period of time. As the cost of using housing services is not directly observed for homeowners, it is proxied by market rentals.

Changes in the CPI imputed rentals on OOA, however, have no direct impact on the monthly cash expenditure of most households in Singapore as they already own their homes. Hence, the CPI less imputed rentals on OOA is compiled as an additional indicator to track households' actual expenditures. Actual rentals paid on rented homes are still included in this measure.

CPI Statistics

Detailed CPI statistics can be found in the Department of Statistics' release titled "Singapore Consumer Price Index for August 2022". This release also contains further information on the various price indicators published.
